14 April 2006

**To Whom It May Concern**

We are pleased to confirm that Iseki Redivac Ltd have, with the assistance of their Malaysia Distributors Envitech Sdn Bhd supplied, installed and commissioned their Interface Valves and other associated technologies to the Bandar Botanic Township.

The Bandar Botanic site will eventually include the use of 1,500 Redivac Interface Valves which will be connected to 8 Vacuum Collection Reservoirs and be capable of collecting the sewage from the more than 46,000 population.

Iseki Redivac and Envitech started the installation of the first Vacuum Collection Reservoirs and Interface Valve chambers in 2003 and have to date installed and commissioned 5 of the Vacuum Collection reservoirs and 650 of the Redivac Interface Valves.

Our experience relationship while working with Iseki Redivac and Envitech has been very good and we are satisfied with the quality of equipment supplied and effective maintenance services. Redivac have always provided a good level of technical support and their system has the flexibility to meet the requirements of modern homes in Bandar Botanic Township.

Thank you.

Yours faithfully,  
for HARUM INTISARI SDN BHD

Peter Quah  
Township Manager
