Letter of Reference

To Whom It May Concern

Abony Town Municipality Waterworks has been operating the water and wastewater systems of Abony and Köröstetétlen since year 2002.

Data of Abony town vacuum system:

Length of vacuum mains:	30 km
Length of discharge mains to treatment plant	6-7 km
No of houses connectable:	2 200
No of houses connected to date:	2 157
No of Iseki valves:	499
No of vacuum stations:	2
Population served:	cc 6 750 people
Daily flow rate :	450-500 m <sup>3</sup> /d
Energy demand of vacuum sewage collection and discharge:	0.8 kWh/m <sup>3</sup>

The operation of the entire system is done by three persons including the planned preventive maintenance and the daily routine work.

The system worked well without significant faults in the past four years of operation.

We are satisfied with Iseki's contribution in the training of our staff during commissioning.

The service and spare parts supply of Iseki is well done and full coverage.

We are happy to share our experience with everybody interested in the application of vacuum sewerage systems.

Abony, 10<sup>th</sup> of May 2006
