Nadarzyn, 26.04.2006

Reference

The construction of first stage of vacuum sewerage system in Nadarzyn was completed in 2001 and after completion of second stage we have under operation one vacuum station, 243 Iseki valves and 15,6 km of vacuum mains. System is collecting sewage from 365 houses. Iseki valves are controlled by monitoring system.

Next stage with 34 no of valves, 40 houses and 2,1 km of vacuum mains will start operation in May 2006.

The technical design of vacuum sewerage systems in Iseki technology is nearly completed for villages located in our Community as;

- Rusiec
- Stara Wieś
- Kejetany
- Nadarzyn Południe
- Strzeniówka

All together will be connected to new vacuum sewerage systems 750 houses.

We have good technical support from Iseki Redivac staff, during systems construction and operation.

Due to good training and experience of our operators, operation and maintenance vacuum networks with ISEKI, REDIVAC valves is easy and do not create any major problems.

We can recommended ISEKI, REDIVAC technology whoever wants to use it specially in flat terrains.
